Workflow solutions

ProMobile – the mobile dictation solution

ProMobile is a mobile dictation solution which enhances smartphones with professional dictation functionality, reducing the effort and steps involved in recording and processing dictation for medical practices, law offices, hospitals and insurance companies – simply and at low cost. After the system software has been installed, dictation can be conveniently recorded, processed and sent with AES or DES encryption, facilitated with the simple menu system and by using either the keypad or the mouse.

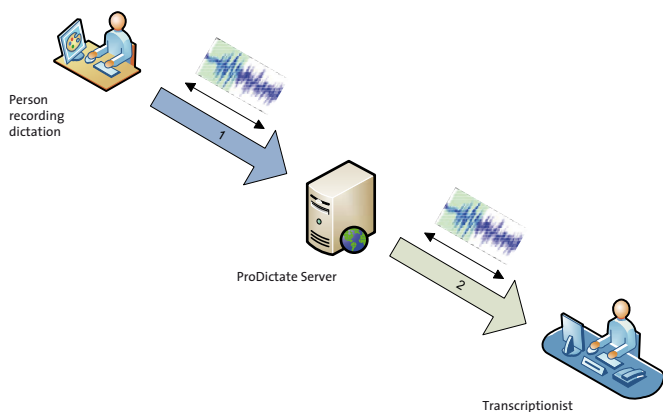

Use the existing network infrastructure

Once recorded and processed, dictation can be sent to existing digital dictation systems by UMTS, WLAN, GPRS or e-mail. Automatic data import by the server ensures that dictation is instantly available to transcriptionists. This saves time and processing steps and also reduces operating expenses thanks to faster and improved workflow.

The system

The fully-equipped ProMobile system comprises the web server software, telephone software and the hardware and playback software for transcriptionist connectivity. The web server can be installed on a Windows server or operated virtually. ProMobile licences can be easily set up for all Nokia E series and BlackBerry phones.

More productivity, efficiency and mobility

Built-in dictation processing functions meet every possible need. In addition to recording and playback, fast-forward, rewind, flag setting, delete and insert are all standard functions, all easy to control with the mouse or telephone keypad. Key assignment depends on the BlackBerry model used and is controlled by default via the numeric keypad.

Once created, the dictation is saved in AMR format. The minimal AMR file size is a key advantage compared with WAV files. One minute of dictation requires about 86 KB, enabling fast data transmission with attendant cost savings.

That little bit extra...

For users:

ProMobile converts a smartphone into a modern digital dictation device. There is no need to own and operate an additional separate dictation device. ProMobile also provides users with a flexible and mobile dictation solution that offers ease of use and reliability. Dictation is encrypted to meet modern security standards and prevent unauthorised access to sensitive data by third parties.

For IT administrators:

ProMobile improves workflow, saves time and reduces procurement costs, system expansion and maintenance. Unlike ordinary dictation devices, the ProMobile dictation solution can be almost infinitely scaled to modern phones. Employees located in various geographies, for example, can be linked easily, securely and at low cost via ProMobile or linked in to existing digital dictation systems and/or network infrastructures.

The ProMobile software comes with powerful standard components. Numerous extended functions and add-on modules are also available. In addition to other functions the ProMobile web server allows phones to be configured remotely. Simple web administration can be performed centrally by a member of the IT team and avoids costs. The ProMobile dictation software is compatible with Dictaphone systems marketed by Nuance and ProDictate available from Brainworks GmbH.

About Brainworks GmbH:

Brainworks GmbH, based in Kleinmachnow, Berlin, is a leading supplier of digital dictation management solutions and voice recognition systems. In addition to major insurance companies, tax authorities and hospitals, small and medium-sized enterprises throughout Germany rely on Brainworks software and hardware. Nuance has selected the company as its strategic partner in Germany.

Brainworks products enhance corporate productivity while reducing operating costs. The efficient dictation and document systems allow automated day-to-day administrative tasks through state-of-the-art voice recognition and processing. The flexibility of individual software programs enables desktop, laptop, tablet PC, thin client or PDA use. Interfaces enable the software to be combined with third-party products and existing in-house applications while accelerating existing administrative processes.

Brainworks services include technical support, practical training, a qualified sales team, first-class consultancy and highly efficient logistics.
