

# Walkabout™ Express

## Portable Voice/Data Exchange

Although physicians are familiar with tape-based portables, these analog cassette recorders have limited value when dictating within the boundaries of the hospital's centralized dictation system. Recognizing this, Walkabout Express® adds digital portability to the equation, then combines it with network connectivity to a powerful enterprise-wide voice/text workflow management solution. The result is a unique combination of ease, convenience, and performance. Today, physicians have more flexibility than ever, with ease-of-use that translates into greater productivity and enhanced reporting capabilities. Walkabout Express is an example.

### Walkabout Express Features:

- Full digital voice recording with complete Enterprise Express integration by LAN/WAN or Internet network connections.
- Ergonomic design matches familiar physician dictation preferences, including easy-to-use Thumb Wheel and slide switch, and convenient LCD display.
- Intuitive user interface minimizes key-press sequences for maximum user convenience.
- Removable miniature card Flash Memory provides 6-98 minutes of voice storage per card (optional memory card required for maximum capacity).
- Long-life Nickel Metal Hydride batteries and high speed battery charger included.
- Docking Station connects to your network-enabled PC at any convenient location throughout the healthcare facility, providing rapid download of voice and data.
- Software upgradeable. No reason to change chips or firmware as upgrades occur.
- Optional bar code and keypad versions available.
- Client PC must meet Dictaphone's minimum PC and network specifications for Walkabout Express.
